- Programming Languages**: JavaScript (ES6+), TypeScript, C/C++.
- Version Control**: Git, GitHub.
- Operating Systems**: Windows, MacOS.

Expertise

- Software Development
- Agile Methodology
- Scrum Frameworks
- Requirement Gathering
- Root Cause Analysis
- Project Execution

Language

- English
- Hindi

Ishika Kumari

Software Engineer

Profile Summary

- Detail-oriented **Full-Stack Software Engineer** with nearly **3 years** of experience building **scalable, user-centric, and accessible web applications** in the Healthcare domain. At **Brainerhub Solutions**, I lead major enhancements for the **ABA Engine platform**, including **automation workflows, communication modules, reporting dashboards**, and **enterprise features** that improve user experience and operational efficiency.
- Skilled in **React.js, Redux Toolkit, Next.js, Node.js, responsive UI development, Figma-based alignment, API integrations**, and performance optimization. Proficient with **REST APIs, Webpack, NPM, Yarn, Git, VS Code** and modern frontend tooling. Strong understanding of the **SDLC**, with hands-on experience in **Agile methodology, Scrum frameworks, requirement gathering, root cause analysis**, and **end-to-end project execution**.
- Recognized with **Team Player** and **Customer Hero** awards for consistent delivery, quick turnaround, and effective issue resolution.

Work Experience

Brainerhub Solutions , Ahemdabad 2023 - Present

Software Engineer - Full Stack

Project : ABA-Engine - ABA Healthcare Organization Management System

- Developing scalable web modules for scheduling, automation, and communication using **React, Redux, Node.js, and PostgreSQL**.
- Implementing rule-based automation workflow for email triggers, scheduling reminders, and credential expiration alerts.
- Designing reusable email templates and integrating the **Nylas API** for complete email lifecycle management—compose, reply, and tracking.
- Integrating **Syncfusion Scheduler** with advanced booking logic supporting 1-on-1, group, and recurring sessions based on location and availability.
- Building data-driven dashboards using **Bold BI** to visualize scheduling trends, revenue performance, and resource utilization.
- Streamlining client onboarding and daily operations through task management and workflow **automation features**.
- Integrating **SurveyJS** to enable dynamic form creation and assessment tracking across various completion stages.
- Enhancing **role-based access control**, business settings, and **in-app messaging** for secure, collaborative user interaction.

Project:SaveForLater - Collaborative Knowledge Platform

- Developed the front-end in React using React Flow to visualize summarized content through interactive node-based charts.
- Enhanced user engagement by adding learning exercises, inline comments, and collaborative workspaces.
- Enabled real-time co-editing and annotation by allowing teams to upload YouTube videos, PDFs, Notion pages, Medium articles, and Google Docs with draggable comments.
- Designed and implemented team management modules for space creation, member invitations, and in-app communication.
- Built and optimized a Node.js back-end to streamline API routing and data exchange with a Python-powered NLP service.
